# Experiment-2:

## Design a user interface prototype for a mobile station using Figma, considering connectivity and convenience.

## Aim:

To design a user interface prototype for a mobile station using Figma, focusing on connectivity, accessibility, and convenience for users.

## Procedure:

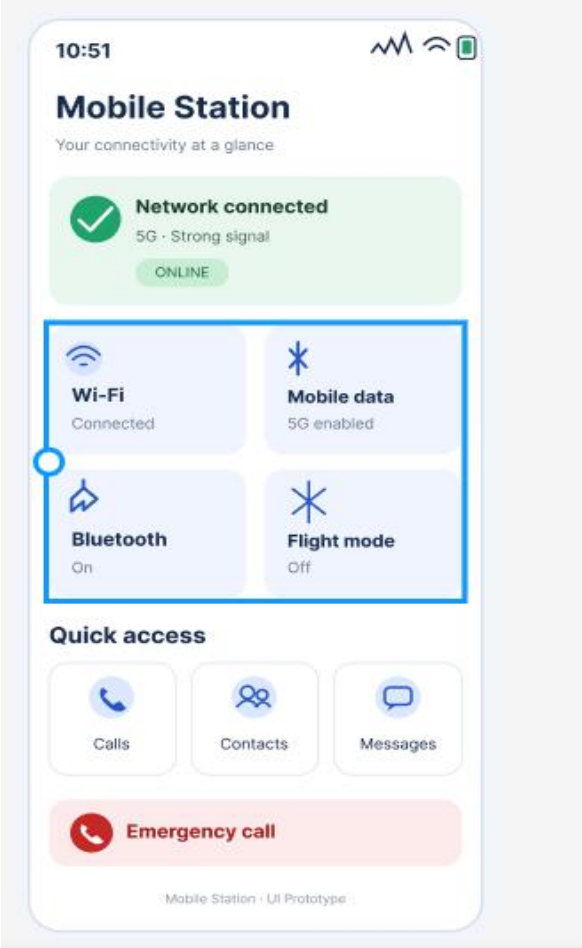

1. Open Figma and create a new design file.
2. Create a mobile phone frame, such as iPhone 15 (393 × 852 px).
3. Design a home screen with a simple, user-friendly layout.
4. Add the following UI components:

- Network status: signal strength, 4G/5G indicator, and Wi-Fi status.
- Connectivity controls: mobile data, Wi-Fi, Bluetooth, and airplane mode.
- Communication: phone calls, contacts, and messages.
- Convenience features: battery level, quick settings, notifications, and location.
- Emergency access: a clearly visible emergency call option.

OUTPUT:

RESULT:

A mobile station user interface prototype is planned with clear network status, quick connectivity controls, communication shortcuts, and emergency access. The design prioritizes ease of use and can be made interactive using Figma's Prototype feature.
