EXPERIMENT-6

Aim:

To simulate a handoff scenario in a mobile network using Figma and visualize how a mobile device transfers its connection from one base station to another while moving between network coverage areas.

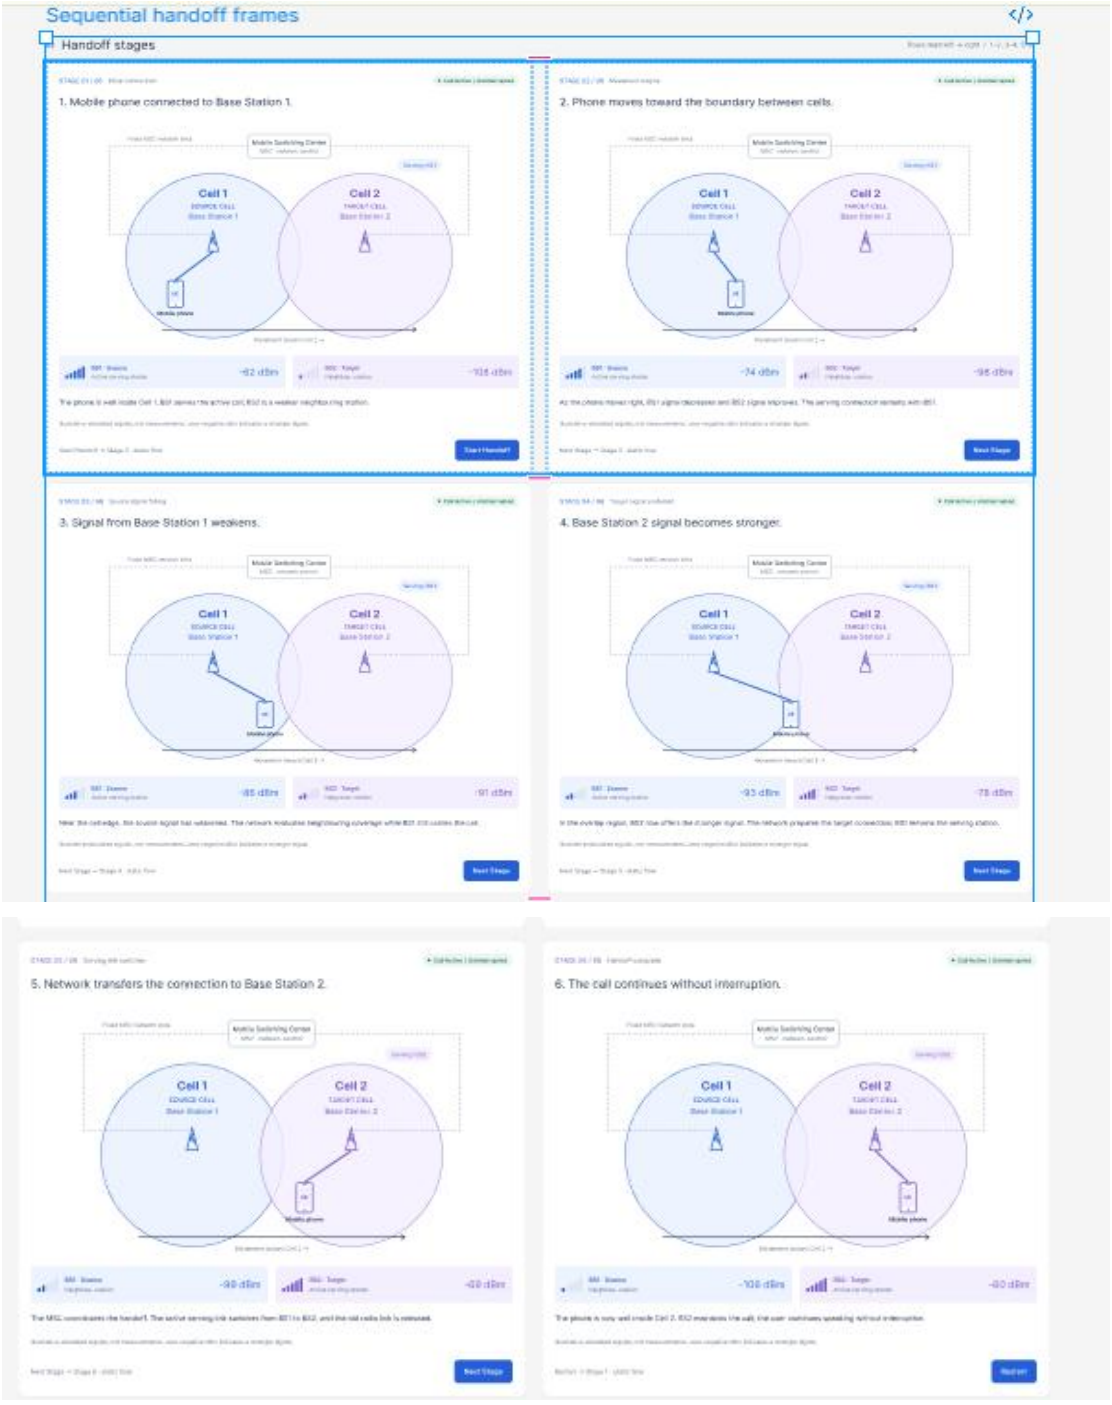

Procedure:

- Open Figma and create a new design file.
- Create a frame to represent the mobile network environment.
- Draw two circles to represent the coverage areas of Base Station 1 (Cell A) and Base Station 2 (Cell B).
- Place a mobile device icon inside Cell A to represent the starting position.
- Use arrows to show the movement of the mobile device toward Cell B.
- Add signal-strength indicators for both base stations.
- Illustrate the handoff process using these stages:

Output:

Result:

A mobile network handoff scenario was visualized in Figma, showing a mobile device moving from Cell A to Cell B and transferring its connection from Base Station 1 to Base Station 2. The prototype illustrates how handoff helps maintain an ongoing connection as a user moves between cellular coverage areas.
