EXPERIMENT:4

Aim:

To design a simple mobile application wireframe using Figma that incorporates localization features such as location detection, nearby places, distance display, and navigation.

Procedure:

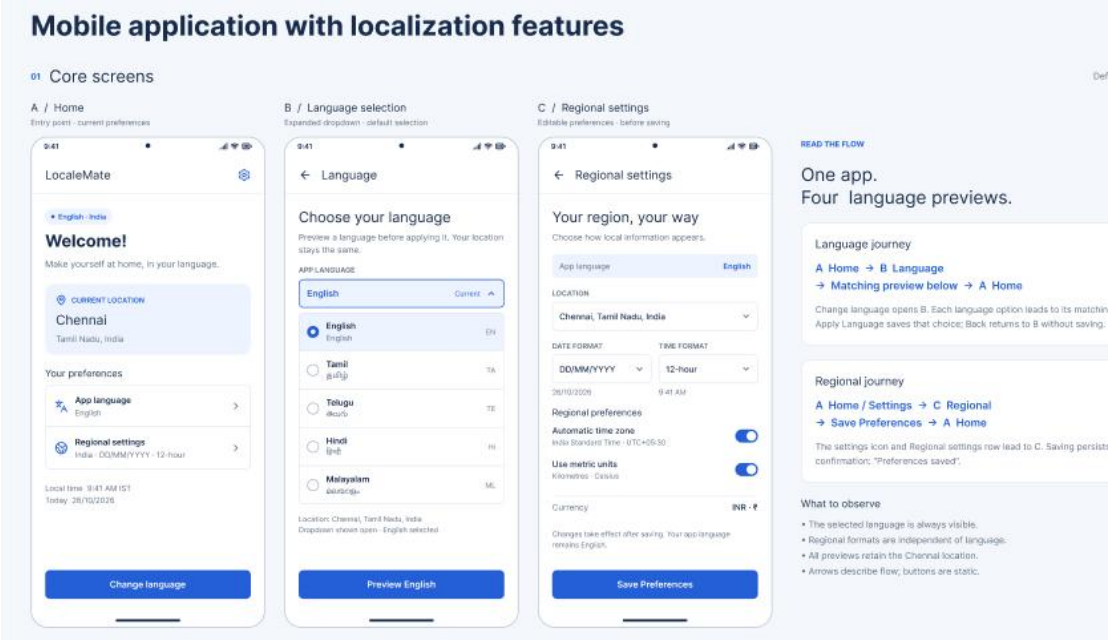

- Open Figma and create a new design file.
- Create a mobile frame using a suitable device size.
- Add a search bar to search for nearby places.
- Design a map section to display the user's current location.
- Add nearby places, such as coffee shops and parks, with their distances.
- Include a Get Directions button to help users navigate to selected locations.
- Arrange the elements clearly using simple shapes, lines, and text to create a wireframe.

Output:

Result:

A simple mobile application wireframe incorporating localization features was designed, showing the user's current location, nearby places, distances, and a navigation button. The design can be used as a basic prototype for a location-based mobile application in Figma.
