EXPERIMENT:4

Aim:

The visual should show how a mobile device communicates with a cellular network through multiple protocol layers, from the physical radio connection to application services.

Procedure:

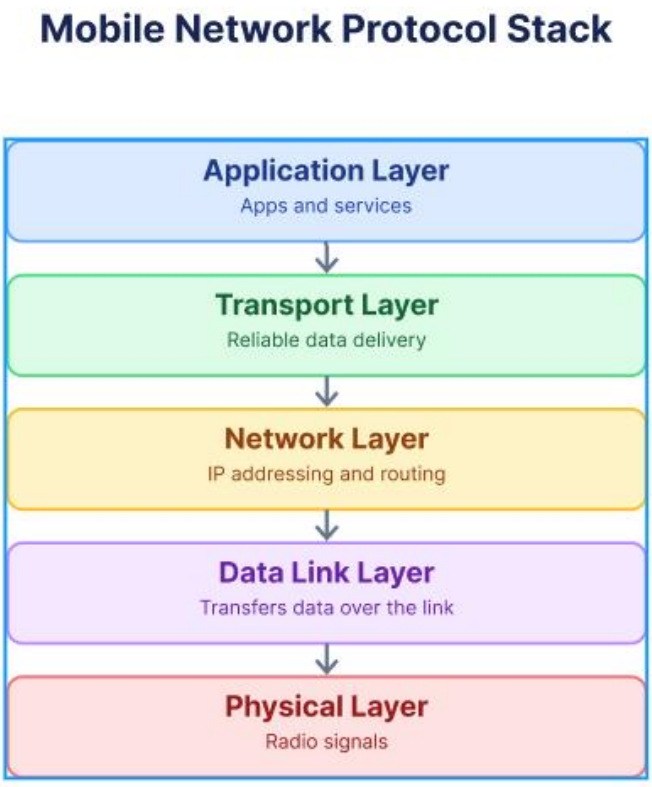

- Application layer: Web, messaging, and mobile applications.
- Transport layer: TCP and UDP. Network layer:
- IP addressing and packet routing.Data link layer:
- Radio link control and medium access control (RLC/MAC).
- Physical layer: Radio transmission over the air interface.

Output:

Result:

The simple mobile network protocol stack diagram was successfully created, showing the five main layers: Application, Transport, Network, Data Link, and Physical. It illustrates how data moves through the layers to enable communication in a mobile network
